

Magnesium Elektron

GRAPHIC ART PRODUCTS

Service & Innovation In Magnesium

MAGNESIUM ELEKTRON GRAPHIC ART PRODUCTS (MEL) specializes in the production and sale of magnesium photoengraving plates and other products related to the chemical etching process. MEL offers two coating types: the industry standard "Red Top" plates and the new aqueous-developed, environmentally friendly AQ-BLU plates.

Magnesium photoengraving plates are an excellent choice for use as single or multi-level embossing dies and foil stamping dies, as well as a host of other applications. Magnesium dies can be produced quickly, can be easily tooled and machined, and are very cost effective.

MEL is the world's primary producer of high purity photoengraving grade magnesium alloy millsheet and operates a state-of-the-art, dedicated magnesium photoengraving finishing plant. Due to the extensive expertise and experience of our people, MEL provides engravers with unsurpassed product quality, consistency and technical support.
